Step One Program

Good afternoon, my name is Victor, I am studying in the last year from Computer Engineer in Salamanca University which sent me the information for the Step One Program to work in EEUU for six months.

Before I entered at the University I had studied for two years a vocational degree as Computer Technician in Zamora, and in the last four months of the course I did the practices in "Virgen de La Concha" hospital. After that, I went to University for three years, and the last one I applied for a scholarship to study Japanese language and culture in Kyoto University of Foreign Studies, where I began with my final project. When I came back from Japan I finished my project and began another one like programming for Android devices, Java and Web Programming (JavaScript, PHP, HTML5, and so on).

I consider myself as a reliable person, always on time and seeking new things for a new challenge, alone or in a teamwork, that is why I want to participate in this Program.

In my free time I do cycling and play frontenis with my friends.
